EDUCATION

New Jersey Institute of Technology (NJIT)

Master of Science in Computer Science

GPA: 4.0/4.0

Newark, NJ, USA

December 2025

Selected Coursework: Data Management System Design, Machine Learning, Big Data, Operating Systems Design, Software Project Management, Cloud Computing, Artificial Intelligence

Mahindra Ecole Centrale

Bachelor of Technology in Computer Science and Engineering

GPA: 8.6/10

Hyderabad, India

August 2023

Selected Coursework: Data Structures, Web Programming, Machine Learning, Computer Networks, OOP, Software Engineering

WORK EXPERIENCE

FIS

Atlanta, USA

Software Engineer II

January 2026 – Present

- Modernizing the Cards platform by migrating legacy COBOL components to Java, improving backend maintainability, scalability, and long-term system reliability.
- Contributing to AI-driven document anomaly-detection solutions for customer mailer validation, building on PDF-based workflows and extending support toward AFP processing.
- Designing, testing, and delivering production-ready enterprise software features in Agile teams, translating business requirements into reliable backend services and document validation systems.

Global Payments

Atlanta, USA

Software Engineer Intern

June 2025 – December 2025

- Built AI-powered software for automated anomaly detection in customer-facing mailer PDFs and HTML templates, reducing manual compliance review time from 2–3 hours to under 15 minutes.
- Developed and optimized Python-based ML pipelines to detect text overlap, layout issues, and missing-value anomalies in semi-structured documents, cutting anomaly detection time by 90%+ and achieving 95% accuracy.
- Collaborated with engineers and stakeholders to design, test, and integrate production-ready solutions into enterprise systems using Agile development practices.

Cognida.ai

Hyderabad, India

Software Developer

August 2023 – October 2023

Software Developer Intern

February 2023 – July 2023

- Built an internal mobile application using Microsoft PowerApps to streamline assignment tracking and status reporting, improving operational efficiency and stakeholder visibility.
- Used client and usage data to identify product and workflow improvement opportunities, supporting development of more effective software solutions.
- Worked with cross-functional teams to translate business requirements into implementable features, user stories, dashboards, and technical deliverables.

ACADEMIC PROJECTS

Disaster Recognition from Aerial Images

NJIT | January 2025 - May 2025

- Built and evaluated a MobileNetV2-based computer vision pipeline in Python for aerial disaster image classification, using data augmentation and class balancing to improve model generalization on imbalanced datasets.

Used Cars Price Prediction

NJIT | August 2024 - December 2024

- Developed an end-to-end machine learning pipeline for used car price prediction using Random Forest and Gradient Boosting, with feature engineering, preprocessing, and SHAP-based model interpretation.

AD MAKER (Undergraduate Research Project)

Mahindra University | January 2022 - December 2022

- Built an interactive ad-generation system that uses GPT-3, ConceptNet, and NRCLEX to generate ad concepts given product type and emotional tone.
- Designed NLP pipelines for large ad datasets, including emotion tagging, semantic filtering, and content ranking to improve relevance of generated ads.

SKILLS

Programming Languages: Python, Java, C, C++, JavaScript, HTML, CSS, SQL

Software Engineering: Data Structures & Algorithms, OOP, REST APIs, Testing, Backend Development, Microservices, Agile, Git

Machine Learning/ Artificial Intelligence: Scikit-learn, TensorFlow, PyTorch, Pandas, NumPy, Model Evaluation, Computer Vision, NLP

Tools: Visual Studio Code, IntelliJ, Android Studio

Systems / Platforms: Linux/Unix, AWS, Cloud Computing
